SAFETY-RELATED COMPONENT WARNING!

COMPONENTS IDENTIFIED BY SHADING AND MARK

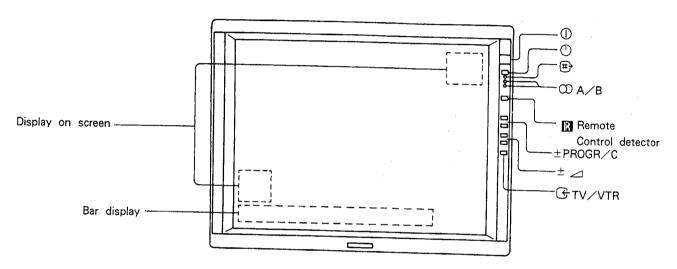

ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1 GENERAL

1-1. FEATURES

- New Microblack Trinitron picture tube for a high resolution and high contrast picture.
- S VIDEO INPUT connector through which Y (luminance) and C (chrominance) signals can be input separately. This reduces interference between the signals and ensures excellent picture quality.
- Multi system PAL (B, G, H, I) SECAM (L) can be received.
 And NTSC4.43 and 3.58 with video input can be also received.
- Flicker free function produces clear picture.
- Noise Reduction function
- Frequency synthesiser tuning system
- Detachable speakers
- 21-pin connectors allow direct hook-up to up to two VCRs and/or other equipment.
- Teletext adaptor is built—in.

1-2. FUNCTION OF CONTROLS

On the set

On-screen display

Indicates program numbers, input modes; \bigcirc 1, \bigcirc , \bigcirc 2 and \bigcirc and picture and sound adjustment items. Press \bigcirc on the Rremote Commander to display them on the screen.

Bar display

Indicates the level of the user controls when they are adjusted.

1 Power switch

To cut off the mains electricity supply, press this switch. Ensure correct operation by pressing this switch fully.

standby indicator

Noise reduction indicator

Stereo A/B indicator

Remote control detector

Point the Remote Commander towards this detector.

PROGR +/- buttons

Use to scan the available channels. And to return to TV mode from standby mode when Remote Commander is not available.

Volume +/- buttons

TV/VIDEO button

Press to select the TV or one of the other input modes.

- Uideo signal through 5 1 (21-pin connector) can be seen on the screen.
- RGB signal through 1 (21-pin connector) can be seen on the screen. Sharpness is fixed in this case.
- ∀2 Video signal through 2 (21 pin connector) can be seen on the screen.
- S video signal through 32 (21-pin connector) can be seen on the screen. When you see S video, make sure that the set is in the S video mode.

S video input

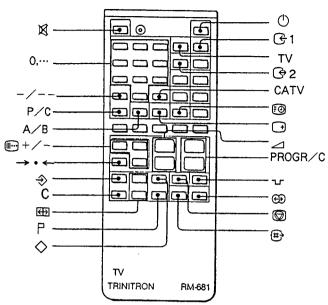

Video signals may be separated into Y (luminance) and C (chrominance) signals.

Usually these two signals are combined in a VTR and output as one signal, and supplied to a TV. Separation of the Y and C signals prevent them from interfering with one another, thereby improving picture quality. This set is equipped with an S video input jack through which these separated signals can be input directly.

Connect the S video output jack on the VTR to the S video input on this set.

Headphones jack (stereo minijack)

(KV-FX29TA, FX29TD RM-681)

On the Remote Commander

M mute button

Use to mute the sound.

0,..., 9, buttons

Use to select a program number.

-/-- button

Use to select a program number over 9. To select 23, press \bigcirc , then 2 and 3.

CATV button

Use to select CATV channels.

P/C (program/channel) button

Use to select the channel mode or to return to the program mode.

A/B bilingual button

Press to select channel A (usually the local language) or B (usually the original language) of a bilingual program. Both indicators light up if a stereo program is received.

⊙ On – screen display button

Press to make the display appear on the screen. And again to make it disappear.

Standby button

Press to turn the set into the standby mode. Use this facility to turn off the set for short periods of time. To return to TV mode, press TV or the program number on the Remote Commander; there will be a slight delay before the picture is restored.

TV button

Press to change to TV mode from standby, video input or teletext modes.

G1 input button

Press to view the input picture coming in through the F 1 connector.

Each time this button is pressed, 🖰 1 and 🛱 (RGB) will appear alternately.

Press TV or the program number to return to the TV mode.

② 2 input button

Press to view the input picture coming in through the 2 connector. 2 and 3 (Y/C) will appear alternately. Press TV or the program number to return to the TV mode.

Time button

In TV mode, press to display the preset time on the screen, and again to make it disappear. This function is available only when the teletext service is broadcast in the selected channel.

+/-, picture and sound adjustment buttons.

There are two ways to use these buttons.

1. When watching a TV program

Press repeatedly until the on-screen display of the required item appears, i. e. picture, color, brightness, hue, sharpness, bass, treble or balance.

Adjust by pressing + or -.

2. When presetting TV channels and programs

For details please see "To preset channels".

→ · ← reset button

Press to reset the user controls to the factory-set levels.

→ Preset button

Used when presetting channels.

C clear button

Used when presetting a program to be skipped.

P TV system switch button

Press to select the TV system.

store button

Used when presetting channels.

∠ Volume + / - buttons

PROGR/C +/- buttons

Used to scan the available programs or channels.

en space sound button

Press to obtain special acoustic effects. Press again to restore normal sound. (The indicator on the screen is ...).

moise reduction button

Press to reduce noise on the picture. The indicator on the set lights up.

ு loudness button

Press to enphasize high and low tones. Press again to restore the normal sound. (The indicator on the screen is \dot{x} .)

freeze button

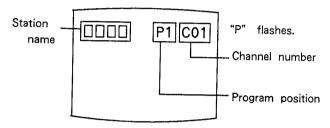

Press to view a still picture. Press again to restore normal picture.

Note Buttons not referred to in this manual do not operate.

1-3. TO PRESET CHANNELS

Use the buttons on the Remote Commander.

- 1. Press \Rightarrow (preset).
- 2. Press a number button on the Remote Commander to select a desired program position.

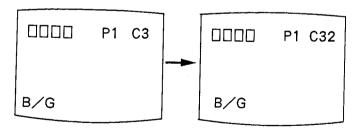

3. Press P to select the appropriate TV system. TV system display changes sequentialy.

4. Press P/C. C starts flashing, then press the desired channel number e. g.

To tune in channel number 32, press 3 and then 2. (To tune in channel number 4, press 0 and then 4.) The display will be as follows.

If you want to name the station,

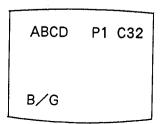

Press . The first column of the station name flashes.

Press +/- to select a desired character.

Press again to make the second column flash, and select a desired character.

Thus four characters can be displayed as desired.

To make the column blank, leave .

When the last column flashes, press . P starts flashing.

To tune in a higher or lower station, press $\bigoplus +/-$. Channel searching starts. Channel number increases or decreases until a TV station is tuned in.

5. Press \diamondsuit to memorize all the station data displayed on the screen.

Then P starts blinking.

If you want to preset more channels, repeat steps 2 to 5.

6. Press ♦.

To skip a position, press C and \diamondsuit in the preset mode. The position is skipped when program +/- button is presed.

To return to TV mode, press 3.

1-4. HOW TO SELECT THE DESIRED CHANNEL

There are two ways to select a channel.

To select by appointing a program number

For direct program tuning for the programs under 10, press 0, 1, 2, 3,...9.

For direct program tuning for the program over 9, press \square and two number buttons. (e. g. \square 3 and then 2)

For sequential program up/down tuning, press PROGR/C +/-.

To select by appointing a channel position

Press P/C to change into the channel tuning mode. "C" appears on the screen.

For direct channel tuning for the normal channel, press two number buttons sequentially.

(e. g. for channel 2, press 0 and 2)

Note

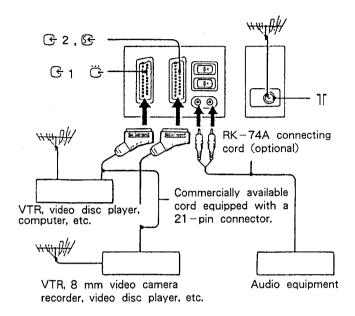

When pressing two number buttons, the second button should be pressed within 5 seconds, otherwise the operation will be cancelled and display will return to the original one.

For sequential channel up/down tuning, press PROGR/C + /-.

1-5. CONNECTING OTHER EQUIPMENT

There are two ways to connect a Video Tape Recorder (VTR).

Connectors on the rear of the set

*Connect S VIDEO output of the VTR, etc. here.

Notes

- Move the VTR away from the TV if the picture or the sound is distored.
- Only one of the VTRs should be turned on at one time.
- It is also possible to connect a VTR using the \ socket.
- Computers cannot be connected to ⊕2.

S video input

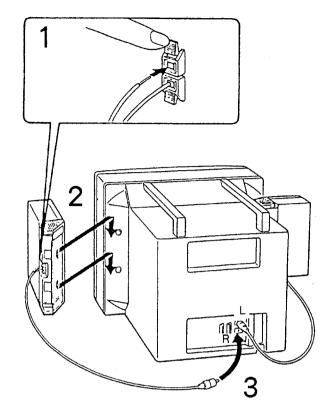

Video signals may be separated into Y (luminance) and C (chrominance) signals. Usually these two signals are combined in a VTR and output as one signal, and supplied to a TV. Separation of the Y and C signals prevent them from interfering with one another, thereby improving picture quality.

This set is equipped with an S video input jack through which these separated signals can be input directly.

Connect the S video output jack on the VTR to the S video input on this set.

1-6. HOW TO ATTACH THE SPEAKERS

- 1. Connect the black cord to the black button on the speaker.
 - Connect the white cord to the red button hole.
- 2. Attach the right and left speakers to the set.
- 3. Connect the left speaker cord to \square L/G/S terminal and the right speaker cord to \square R/D/D terminal on the rear of the set.

1-7. VIEWING TELETEXT

To view the teletext service, use the Remote Commander. The buttons for teletext operation are indicated in green.

Operation

- Select the TV channel for the desired teletext service.
 - When the signal is weak, teletext errors may often occur.
- 2. Press **■**/**②** (TEXT/MIX) to display the teletext service.
- 3. Key in the three digits of the desired page using the number buttons. If an error is made, complete the three-digit sequence by keying in any digit. Then re-enter the correct page number. The requested teletext page is displayed.

To return to the TV mode, press TV on the Remote Commander.

The teletext service can be displayed directly from the standby mode by pressing \bigcirc \bigcirc .

To receive the teletext service of a different TV channel.

- 1. Press TV to return to the TV mode.
- 2. Select the desired TV channel.
- 3. Press 🖹 ∕ 🕏 .

To request the index page

Press (INDEX). If the necessary signal is not being broadcast, page 100 is displayed.

- To access the next or preceding page. Press (PAGE+) or (PAGE-).
- To superimpose the teletext display on the picture

 Press (F) twice from TV mode.

 Press (F) again to return to the TEXT display.

To suppress the teletext display so that the TV picture is displayed.

Press (TEXT CL). This button can be operated from both the TEXT and MIX displays.

To prevent a teletext page from being updated/changed.

Press (HOLD). The HOLD symbol appears on the screen.

To resume normal teletext reception, press ().

, , ,

To enlarge the teletext display

Press nonce to enlarge the upper half of the display; press again to enlarge the lower half of the display. And press again to return to the normal display.

To reveal concealed information such as answers to a quiz Press (REVEAL).

Press again to conceal the answers.

To watch the TV program while waiting for a requeated page to be displayed

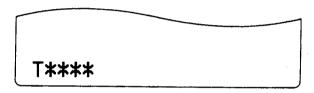

- 1. Request the new page.
- 2. Press to watch the TV program. The requested page number and other data appears at the top of the screen while the page number is being searched for. When the requested page has been captured, the page number on the screen and the other data disappears.

To have a requested page displayed at a pre-determined time

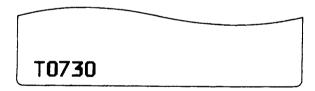

- 1. Request a time coded page (e. g. alarm page).
- 2. Press (TP ON).

"T****" will appear at the bottom of the screen.

3. Enter your request time with the number buttons, using four digits.

For example, 0730.

To watch the TV program until the requested time, press

At the requested time, the page number will be displayed at the bottom of the screen.

To view this page, press 🖹 📝.

To cancel the request, first ensure that the teletext page is displayed, then press (TP OFF).

SECTION 2 DISASSEMBLY

2 one screw

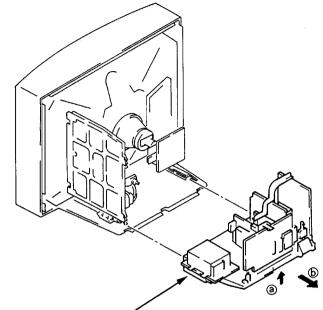

(BVTP4×16)

2-1. REAR COVER REMOVAL

@Rear cover

① two screws (P4×16)

2-2. CHASSIS ASSY REMOVAL

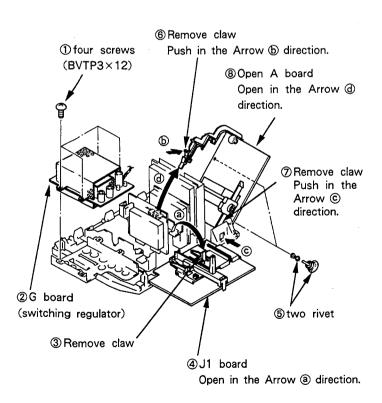

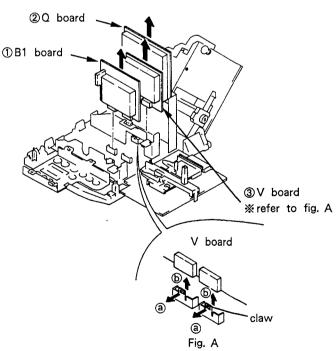

Lift and pull out the rear part of the main chassis toward the rear.

2-3. G BOARD (SWITCHING REGULATOR) REMOVAL AND J1, A BOARDS OPENING

3 four screws (BVTP4×16)

2-4. B1, Q AND V BOARDS REMOVAL

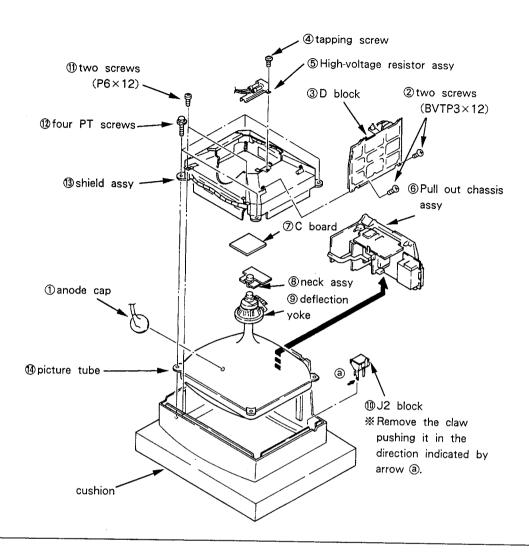

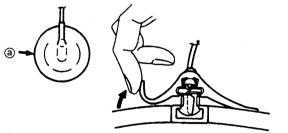

④ Pull out V board after removing the two claws on the connector holding V board in place in the direction indicated by arrow ③.

*The operation must be performed after removal of board B1.

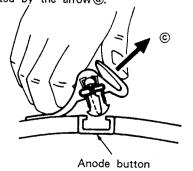

2-5. PICTURE TUBE REMOVAL

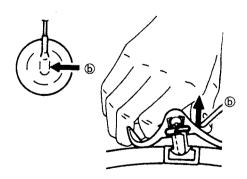

Removing Procedures

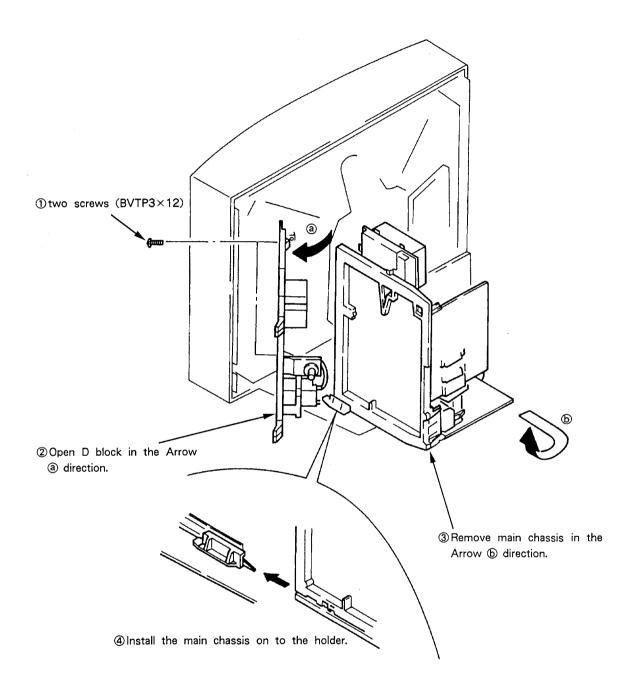

① Turn up one side of the rubber cap in the direction indicated by the arrow ②.

- ② Using a thumb, pull up the rubber cap firmly in the direction indicated by the arrow ①.
- When one side of the rubber cap is separated from the anode button, the anode cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow.

2-6. SERVICE POSITION

SECTION 3 SET-UP ADJUSTMENTS

- The following adjustments should be made when a complete realignment is required or a new picture tube is installed.
- These adjustments should be performed with rated power supply voltage unless otherwise noted.

The control and switch below should be set as follows unless otherwise noted:

◆ CONTRAST control ······ 80% (or Normal by Commander)

⇔BRIGHTNESS control ··· 50%

Perform the adjustments in order as follows:

- 1. Beam Landing
- 2. Convergence
- 3. Focus
- 4. White Balance

Note: Test Equipment Required.

- 1. Color Bar/Pattern Generator
- 2. Degausser
- 3. DC Power Supply
- 4. Digital multimeter
- 5. Oscilloscope

Preparation

- Set the side of the unit with the PICTURE TUBE so that it faces east or west in order to reduce the influence of external magnetic force.
- Turn the power switch for the unit ON and erase the magnetic force using a degausser.

3-1. BEAM LANDING

- Input a raster signal with the pattern generator.
 CONTRAST | normal
- 2. Turn the raster signal of the pattern generator to red.
- 3. Move the deflection yoke backward, and adjust with the purity control so that red is in the center and blue and green are at the sides, evenly. (Fig. 3-1-3-3)
- 4. Move the deflection yoke forward, and adjust so that the entire screen becomes red. (Fig. 3-1)
- 5. Switch over the raster signal to blue and green and confirm the condition.
- When the position of the deflection yoke is determined, tighten it with a deflection yoke mounting screw.
- 7. When landing at the corners is not right, adjust by using the magnet. (Fig. 3 4)

Fig. 3-2

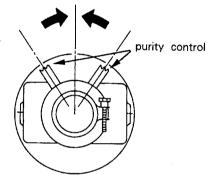

Fig.3-3

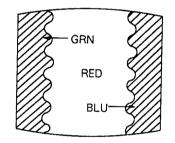

Fig.3-4

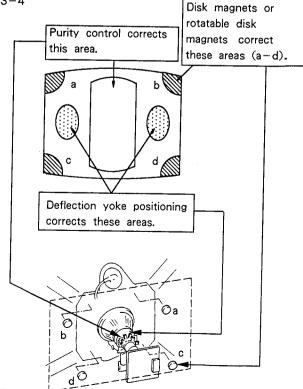

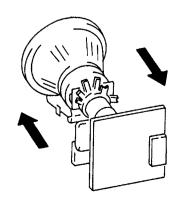

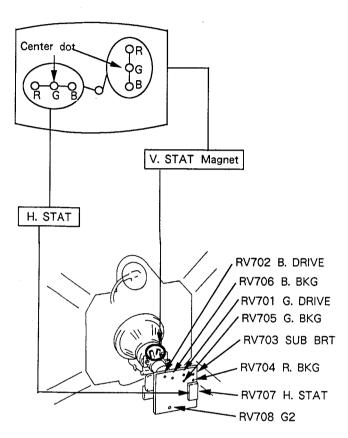

Fig.3 - 1

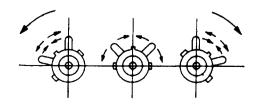

3-2. CONVERGENCE

Preparation:

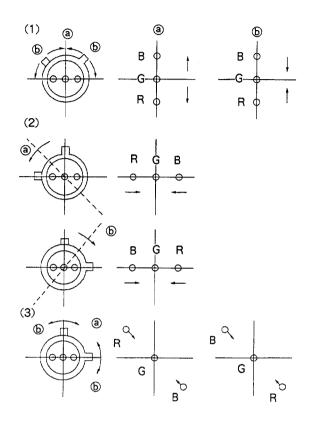

- Before starting, perform FOCUS, H. SIZE and V. SIZE adjustments,
- Set BRIGHTNESS control to minimum.
- Feed in the dot pattern.
- (1) Horizontal and Vertical Static Convergence

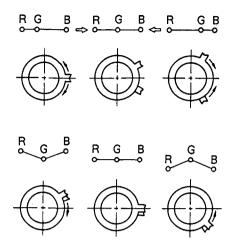

- 1. Adjust H. STAT VR to coincide red, green and blue dots on the center of screen.(Horizontal movement)
- 2. Adjust V. STAT magnet to coincide red, green and blue dots on the center of screen. (Vertical movement)
- 3. If the red, green and blue dots do not coincide on the center of screen with H. STAT VR, perform horizontal convergence adjustment using H. STAT VR and V. STAT magnet as shown below. (In this case, H. STAT VR and V. STAT magnet effect each other.)
- Tilt the V, STAT magnet and adjust static convergence to open or close the V. STAT magnet.

4. When the V. STAT magnet is moved in the direction of arrow (a) and (b), red, green and blue dots move as shown below.

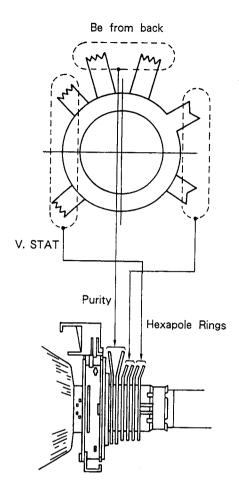

Operation of Hexapole Ringed Magnet

The respective dot operations resulting from the operation of each magnet are not completely independent, so be sure to perform adjustment while tracking.

Use the H. STAT VR to adjust the red, green, and blue dots so they coincide at the center of screen (by moving the dots in the horizontal direction).

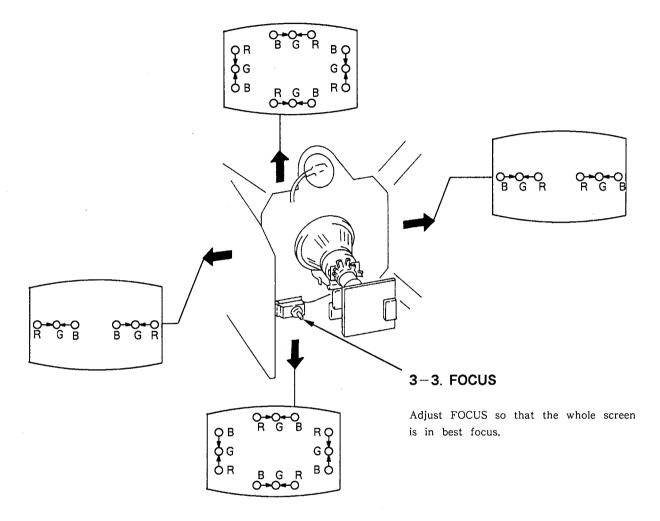

(2) Dynamic Convergence Adjustment

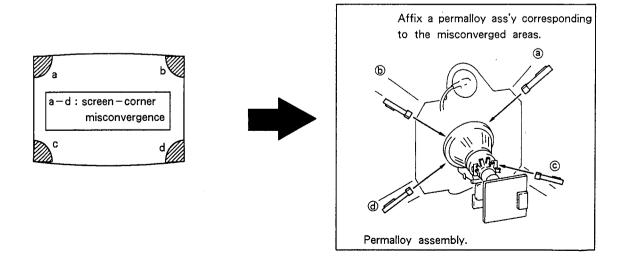

Preparation:

- Before starting, perform Horizontal and Vertical Static Convergence Adjustment..
- 1. Slightly loosen deflection yoke screw.
- 2. Remove deflection yoke spacers.

- Move the deflection yoke for best convergence as shown below.
- 4. Tighten the deflection yoke screw.
- 5. Install the deflection yoke spacers.

(3) Screen - corner Convergence

KV-FX29TD

3-4. WHITE BALANCE

(Screen (G2) Setting)

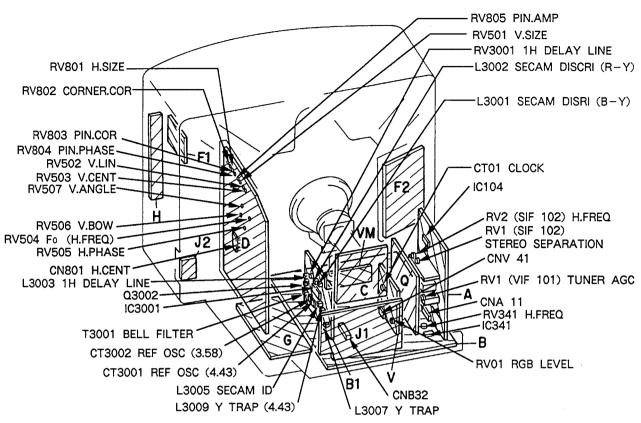

- 1. Input dot signals.
- 2. Set the picture BRIGHTNESS control to the minimum level.
- 3. Apply 170 V dc to the cathodes of R, G, and B from an external power source.
- 4. While watching the picture, adjust the G2 volume (RV708) immediately before the fly-back line disappears.

(White Balance Adjustment)

- 1. Input all-white signals.
- 2. Adjust the BRIGHTNESS and COLOR controls to the standard level.
- 3. Adjust the highlight W/B balance by turning the RV702 (B. DRIVE) and RV701 (G DRIVE). Also, adjust the cut—off W/B by turning RV706 (B-BKG), RV705 (G-BKG) and RV704 (R-BKG). Note that these two balances must be adjusted during tracking.

In the following adjustments, the CONTRAST, COLOR and BRIGHTNESS controls are set to normal unless otherwise specified.

SECTION 4 CIRCUIT ADJUSTMENTS

4-1. A BOARD ADJUSTMENTS

TUNER AGC Adjustment VIF101 (IFG389FS) RV1

- 1. Tune in an off-air signal.
- Adjust RV1 so that snow-noise and crossmodulation just disappear from the picture.

STEREO SEPARATION Adjustment SIF102 (IFG5,5S) RV1

- 1. Input stereo signal (L-CH 1kHz, R-CH 400Hz)
- 2. Check the stereo indicator.
- Connect an oscilloscope to the pin ① (L) of CNA11 through band pass filter of lkHz.
- 4. Adjust RV1 so that 1kHz voltage goes down to the minimum,

H. FREQ. Adjustment SIF102 (IFG5.5S) RV2

- 1. Input PAL COLOR pattern.
- 2. Short circuit between pin ② of IC4 (TDA2595) and ground.
- 3. Connect a frequency counter to the pin (6) through a probe of 10:1.
- 4. Adjust RV2 so that H. frequency becomes 15.625±50Hz. 15.625±50Hz.

4-2. B BOARD ADJUSTMENTS

H. FREQ Adjustment (RV341)

- 1. Input a PAL COLOR BAR pattern.
- 2. Connect pin 12 of IC341 to the ground.
- 3. Connect the frequency counter to pin (6) using the 10:1 ratio probe.
- 4. Adjust RV341 so that frequency H becomes 15.625 ± 50 Hz.

4-3. B1 BOARD ADJUSTMENTS

REF OSC Adjustment (CT3001, 4.43 MHz)

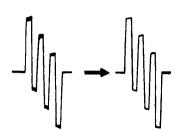

- 1. Input a PAL COLOR BAR pattern.
- 2. Short circuit between pin ① of IC3001 and ground.
- 3. Adjust CT3001 to obtain color synchronization.
- 4. Remove the jumper wire from IC3001.

REF OSC Adjustment (CT3002, 3.58 MHz)

- 1. Input NTSC3.58 COLOR BAR signal.
- 2. Short-circuit pin @ of IC3001 and the ground.
- 3. Adjust CT3002 to obtain color synchronization.
- 4. Remove the jumper of IC3001.

1H DELAY LINE Adjustment (L3003, RV3001)

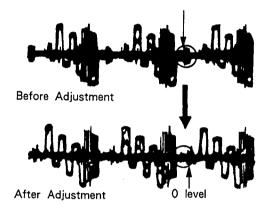

- 1. Input a PAL COLOR BAR pattern.
- Connect the oscilloscope to pin (B-Y) of IC3001 and observe the waveform of the H block on the oscilloscope.
- Adjust L3003 to minimize the double waveform outline,

Before Adjustment After Adjustment

- 4. Input a PAL TEST COLOR BAR pattern.
- Rotate the RV3001 and adjust till the ANT PAL part of the waveform matches the 0 level.

This part matches the 0 level.

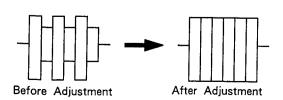

6. L3003 and RV3001 affect each other, so repeat till the conditions of both are met.

SECAM ID Adjustment (L3005)

- 1. Input SECAM COLOR BAR signal.
- Adjust L3005 so that the indicater goes up to the maximum.

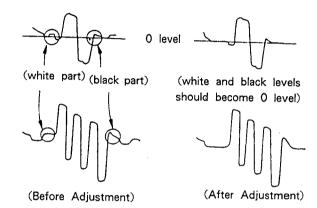

BELL FILTER Adjustment (T3001)

- 1. Input SECAM COLOR BAR pattern.
- 2. Connect an oscilloscope to the Q3002 emitter.
- 3. Adjust T3001 so that the waveform becomes flat.

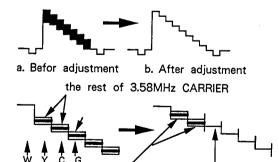

SECAM DISCRI Adjustment (L3002 (R-Y), L3001 (B-Y))

- 1. Input SECAM COLOR BAR pattern.
- 2. Connect an oscilloscope at pin ① of IC3001.
- 3. Adjust L3002 (R-Y) so that white and black part of the waveform of pin ① becomes 0 level.
- 4. Connect an oscilloscope at pin 3 of IC3001.
- 5. Adjust L3001 (B-Y) so that white and black part of the waveform of pin 3 becomes 0 level,

Y TRAP (L3007 4.25 MHz, L3009 4.43 MHz)

- 1. Input PAL COLOR BAR pattern.
- Connect the oscilloscope to the Y-OUT terminal of CNB32 pin[®] to display the waveform for the H portion.
- 3. Adjust L3009 to minimize the CARRIER level.
- 4. Convert the input signal into NTSC COLOR BAR pattern.
- 5. Cancel the forced PAL MODE and set the forced NTSC MODE.
- Adjust L3007 while observing if the signal portions for the CARRIER level for DR (3.58 MHz).

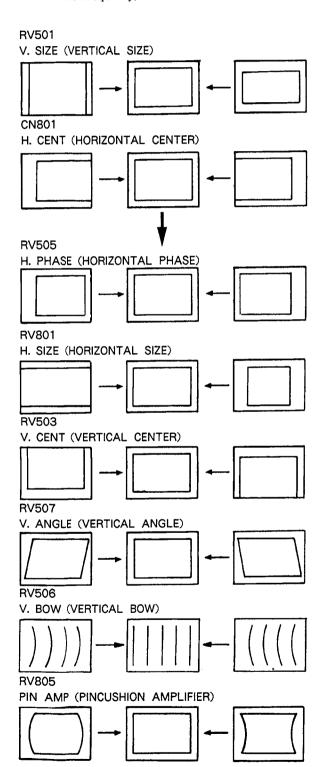

c. The level for the Yellow and cyan portions do not match up.

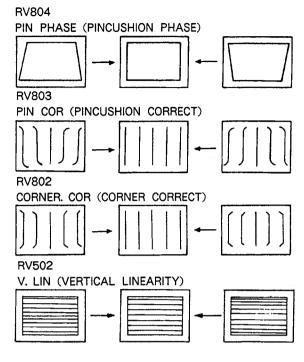

d. Match up the residual CARRIER level.

4-4. D BOARD ADJUSTMENTS

H. FREQ Adjustment (RV504)

- 1. Input PAL COLOR BAR.
- Connect 100/16 chemical condenser between pin
 f) of IC501 and the GND.
- 3. Connect the frequency counter probe to C824.
- 4. Adjust RV504 so that ± 31.25 Hz is obtained for 2H the frequency.

4-5. Q BOARD ADJUSTMENT

H. FREQ Adjustment

- 1. Input PAL COLOR BAR pattern,
- 2. Connect pin (4) of CNQ44 (H SYNC) to the GND.
- 3. Turn the core of L1312 to adjust the position where the screen flows slowly.

4-6. V BOARD ADJUSTMENTS

Clock Adjustment (CT01)

- 1. Disconnect the pins 2 and 3 of CNV01.
- 2. Set up the TELE TEXT mode.
- 3. Adjust CT01 to stop pictures from scrolling.

RGB Level Adjustment (RV01)

- 1. Set PICTURE to maximum.
- Adjust RV01 till the RGB output becomes maximum.

4-7. SUB ADJUSTMENTS

SUB BRIGHTNESS Adjustment

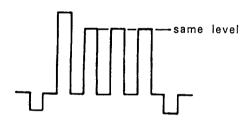

- 1. Receive and display a TEST COLOR BAR pattern.
- 2. Push→•←on the remote commander to invoke the normal state.
- 3. Reduce the ① CONTRAST to the minimum level.
- Adjust the SUB BRIGHTNESS RV703 until the 0 IRE of the gray scale becomes completely cut off, and the 20 IRE becomes barely luminous.

Where no TEST COLOR BAR pattern is available.

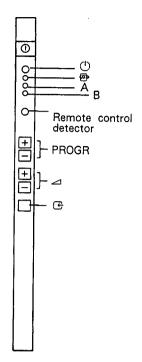

- 1. Display a COLOR BAR pattern.
- 2. Push $\rightarrow \bullet \leftarrow$ on the remote commander to invoke the normal state.
- 3. Set the PICTURE and COLOR to minimum.
- 20 IRE is close to blue, so adjust the SUB BRIGHTNESS RV703 till blue is faintly luminous.

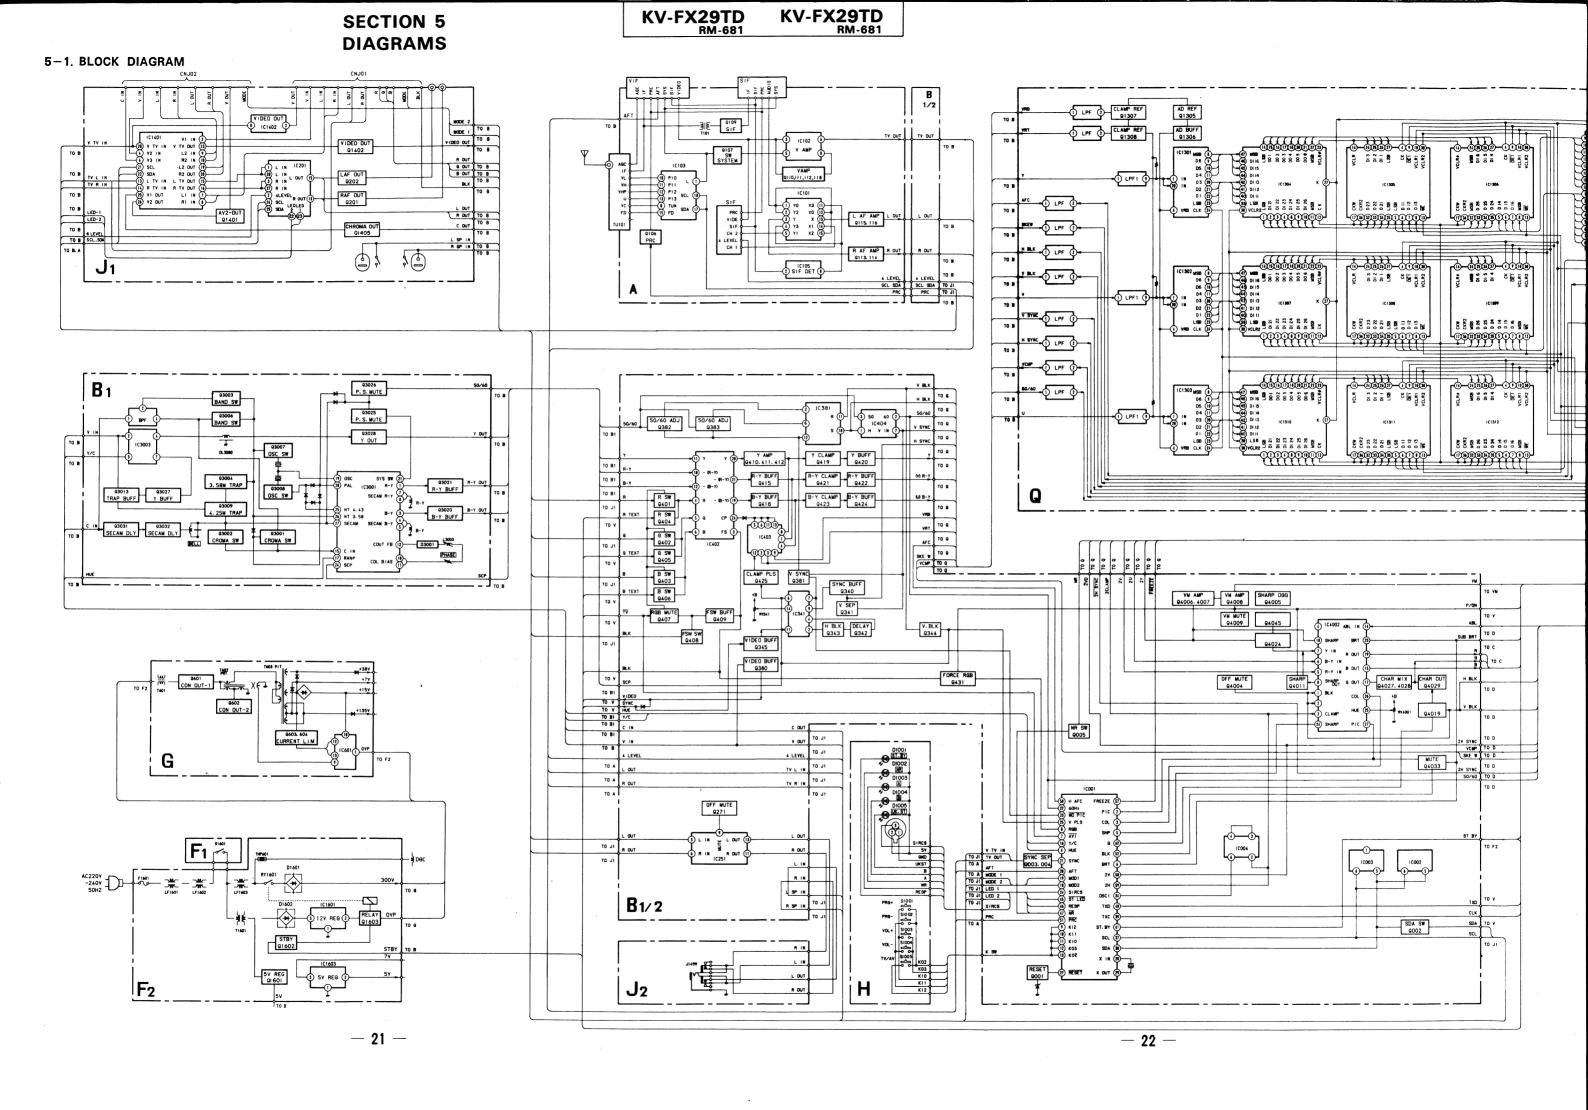

SUB COLOR Adjustment

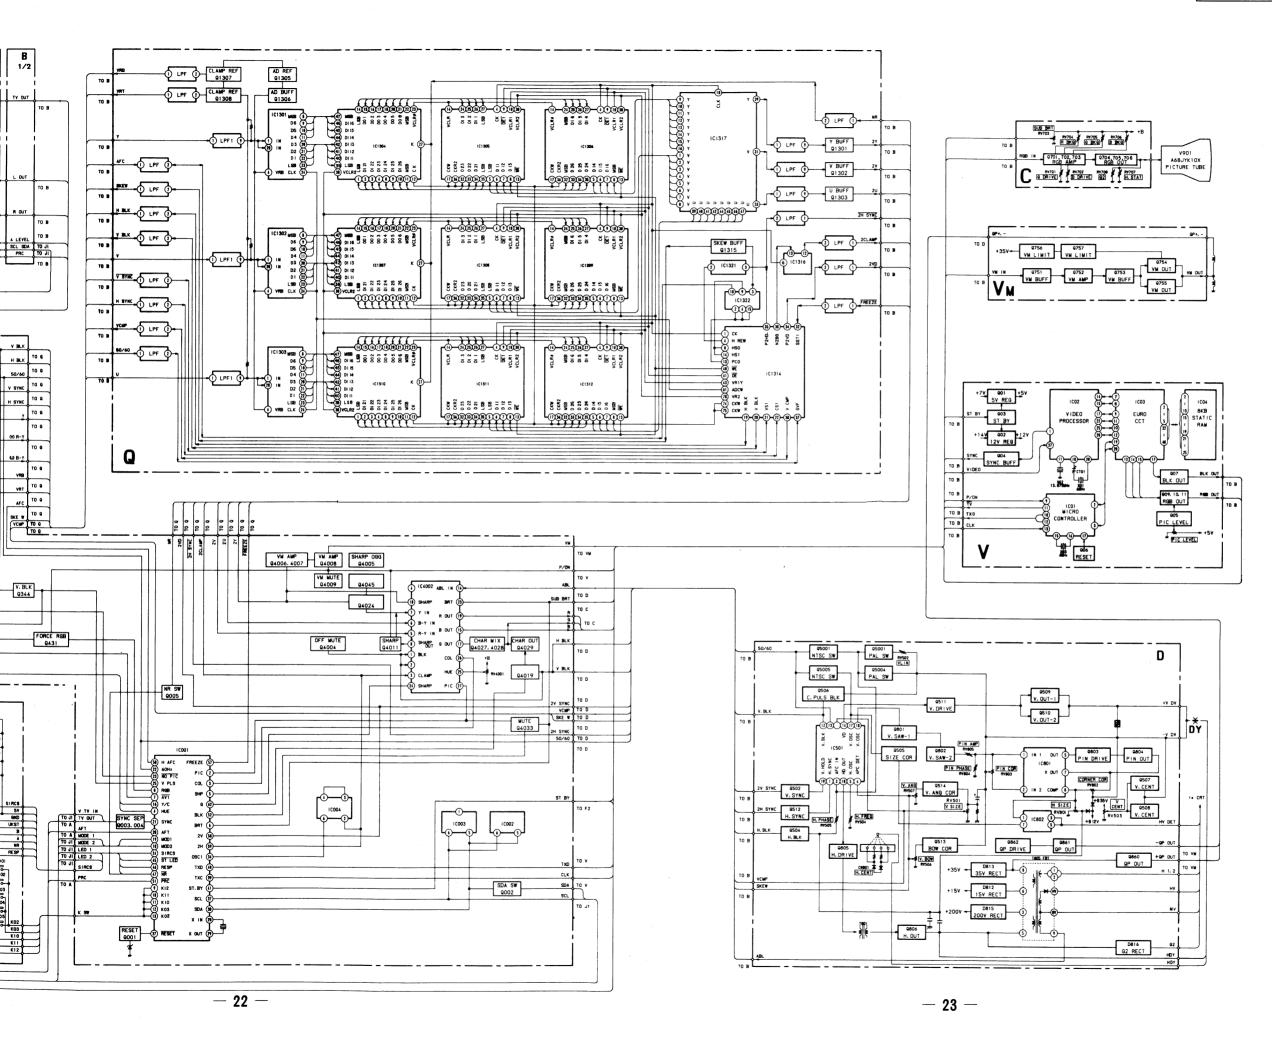

- 1. Display a COLOR BAR pattern.
- Push → ← on the remote commander to invoke the normal state.
- 3. Turn off the power supply.
- 4. Turn on the power supply while pushing the VOL+ and VOL buttons on the unit.
- 5. Adjust the COLOR control until the B out (pin 4) of CNC33 connector on C board) waveform becomes as shown below.

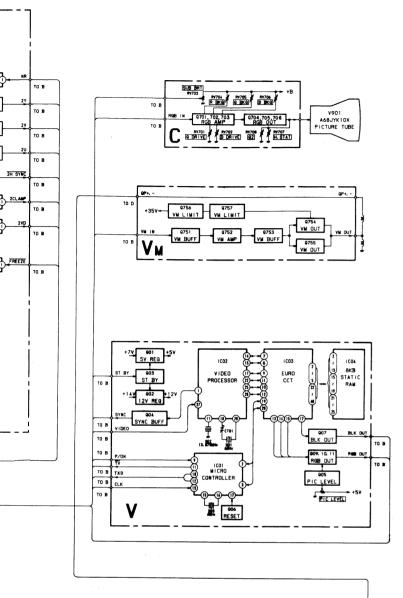

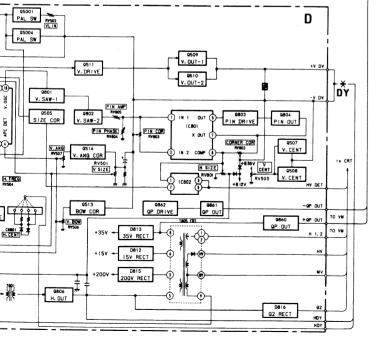

- 6. Push the STORE button on the remote commander. (SUB mode is cleared.)
- * When Step 4 is executed correctly, SUB (SUB mode) is displayed at the upper right of the display. As S (SUB mode) is displayed only for 30 seconds, perform the adjustment within 30 seconds, or repeat from Step 4.
